PROFESSIONAL SUMMARY

Full-Stack Software Engineer with experience building production-ready SaaS, fintech, and compliance systems. Skilled in TypeScript across the full stack, with React and Next.js on the frontend, backed by Node.js, PostgreSQL with Drizzle ORM, MongoDB, and tools like TanStack Query and Redux. Proficient in authentication and authorization, API development, client/server validation, middleware, and scalable architectures.

TECHNICAL SKILLS & KNOWLEDGE

- **Languages & Type Safety:** TypeScript (advanced, end-to-end across client, server, and database layers), JavaScript (ES2022+), Python (file and data manipulation), HTML5, CSS3
- **Frontend & Full-Stack Frameworks:** Next.js (App Router, SSR/SSG/ISR, Server Actions, Edge Middleware), React, TanStack Start, TanStack Query, Redux
- **Databases & Data Layer:** PostgreSQL with Drizzle ORM (schema design, type-safe queries, migrations, performance tuning, optimized search and filtering queries for high-traffic platforms); Redis for caching, fast lookups, and reducing database load on search/filter-heavy workloads; MongoDB with Mongoose ODM (schema modeling, aggregation pipelines, indexing strategies)
- **Backend & Server-Side Frameworks:** Node.js, Express.js, Meteor.js — building RESTful and real-time APIs, middleware pipelines, and modular service architectures
- **Cloud Computing & Serverless Development:** Designing and deploying serverless functions and edge middleware; cloud-native deployment pipelines (e.g. Vercel, AWS Lambda); horizontally scalable, stateless service design; AWS ElastiCache for distributed caching; CDN and edge-caching strategies
- **Authentication, Authorization & Security:** Session and token-based authentication, OAuth flows, role-based access control (RBAC), Supabase Auth for authentication/storage/real-time features, secure middleware patterns, request/response validation and sanitization
- **AI-Assisted & Agentic Development:** Hands-on use of agentic AI coding tools, including Claude Code, for autonomous code generation, refactoring, debugging, and test scaffolding; integrating AI-assisted code review into the SDLC to accelerate delivery without compromising quality
- **DevOps, Tooling & Collaboration:** Git & GitHub (branching strategies, pull requests, code review workflows, GitHub Actions/CI-CD), Vercel deployment pipelines, VS Code, modern package tooling (npm/pnpm), agile and cross-functional collaboration
- **Software Architecture & Best Practices:** API-first design, scalable architecture, clean maintainable code, type-safe client/server contracts, and translating business requirements into practical technical solutions

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Quantum Plus Ltd

Jun 2023 – Sep 2025

Mombasa, Kenya

- Built and maintained full-stack, production-grade applications using React, Node.js, Express, TypeScript, MongoDB, and PostgreSQL, supporting multi-user SaaS and e-commerce platforms.
- Designed and developed secure, well-validated REST APIs with robust middleware layers and scalable backend architecture to support business growth.
- Implemented role-based access control (RBAC) to power secure, multi-tenant SaaS and e-commerce functionality across distinct user roles and permission levels.
- Drove testing, debugging, and performance optimization efforts to ensure system reliability, data integrity, and compliance across customer-facing features.

- Streamlined frontend state management and data-fetching workflows using Redux, Zustand, and TanStack Query, improving UI responsiveness and reducing boilerplate across the codebase.

Data Analyst | CloudFactory Kenya

Feb 2022 – Mar 2023

Nairobi, Kenya

- Processed and structured large-scale datasets using Python, powering reliable downstream software and analytical workflows.
- Designed and built data pipelines and preprocessing scripts to support programmatic data handling and machine learning solutions.
- Developed and tested predictive models and algorithms following scalable, maintainable coding practices, strengthening foundations in data-driven, production-quality engineering.

Junior Web Developer | Swahilipot Hub Foundation

2020 – 2022

Mombasa, Kenya

- Built responsive, interactive UI components using React and TypeScript, translating UI/UX designs into functional, cross-browser-compatible code.
- Collaborated closely with designers and back-end developers to integrate APIs and deliver cohesive end-to-end features.
- Managed database integration with PostgreSQL and MongoDB to support reliable CRUD operations across core application features, laying the groundwork for full-stack development expertise.

KEY PROJECTS

- **eTIMS Integration System:** Developed invoicing systems integrating with Kenya's eTIMS API, implementing backend validation and role-based access control to ensure regulatory compliance and production reliability through rigorous testing and debugging.
- **Booking Platforms & SaaS Applications:** Built multi-role SaaS booking platforms with complex scheduling logic, advanced search and filtering for booking items, and role-based dashboards; leveraged Redis caching to speed up search/filter queries and reduce database load, improving resource management and overall user experience.
- **E-Commerce Platforms:** Developed product catalog, shopping cart, checkout, and admin/user interfaces with integrated inventory and order management features.

EDUCATION

Bachelor of Business Information Technology

2014 – 2018

Dedan Kimathi University of Science and Technology, Nyeri

Gained hands-on experience in programming, web development, database management, and the software development lifecycle, with foundational knowledge in business information systems and IT infrastructure.

CERTIFICATIONS

Nanodegree in Cloud Computing (AWS)

2023

Udacity

Certificate in Financial Technology (FinTech)

May 2023

Corporate Finance Institute (CFI)

Certificate in Business Intelligence

Nov 2022

Corporate Finance Institute (CFI)

Certificate in Software Development

Jan 2022 – Apr 2022

Power Learn Project Academy, Nairobi

Completed a 5-month full-stack program covering front-end (HTML, CSS, JavaScript) and back-end database integration.
